## **LATHAM MARINE TIES IT TOGETHER FOR MERCURY VERADO**

Latham Marine, always pursuing a better and stronger way to address its customers' boating needs, introduces Latham Tie Bar Kits for the Mercury Verado. These front mounted tie-bar systems replace the factory-installed versions and are available for twins, triples and quads. The Latham system fits a variety of configurations, from level powerheads, to six-inch drops. The tie bars bolt to the stock engine location using high-strength studs.

The Latham Marine mounts are fabricated from high quality 316L stainless steel and are polished to a mirror finish. The tie bars are also 316L stainless steel with a satin finish. As with all Latham Marine parts and accessories, these Tie Bar Kits are built to take punishment and extreme marine conditions.

"The Verado engines are large, heavy motors—much like the Yamaha 350's that we designed for—so we created this system to match the speed, vibrations and torque generated by the 350 hp, supercharged engine," says Bob Latham, "Steering your boat should be easy, so finding the fish—or fun—can be too!"

The new Tie Bar Kits are available exclusively through Latham Marine and as with all its parts, quality and durability are top values. "I don't make anything I wouldn't use on my own boat," says Bob Latham. For more information, contact Tom Gongola at 954-462-3055 or 800 422-RAMS (7867) or visit [www.lathammarine.com](http://www.lathammarine.com).
